# INSTRUCTIONS FOR USE OF DS LUBRICANT

## INSTRUCTIONS FOR USE OF DS LUBRICANT FOR PIPES OR MANHOLES

This is to inform you that we can only ensure safety for the installation capability of our slip seals and thus safety for the function of the seals if DS lubricant is used for the installation of the pipes and the manholes respectively.

### REASON

Our lubricant is compatible with our sealing material, its consistency being suited to the "rough" concrete surfaces and functional areas of the slip ring seals. It can be used at temperatures of  $-10^{\circ}\text{C}$  up to  $+40^{\circ}\text{C}$  as well as for wet spigot ends and sockets.

If our lubricant is sufficiently applied with a glove in the right place (see product information), perfect deformation of the seal and thus its ability to work will be ensured. Diluting the lubricant for easy working is not allowed because of the change of gliding characteristics and adhesive strength.

Values and properties shown in diagrams and tables are not subject to any guarantees. Our warranty is limited to the values and properties as required by the relevant standards. Our literature, data sheets and recommendations represent our knowledge at the time of printing but are in no way legally binding on us. Our "General Conditions of Sale" apply to all sales.
